Subject: RE: Working Draft of Sediment reduction chapter of LIS Dredged Material Management Plan
NYS EIP 2013-April-18.docx

Hi Pat:

This is a good summary of some of the programs that help manage sediment and contaminant loads. Some of the material looks familiar to me, since, as part of a Long Island Sound Study effort, the states developed assessments of the effectiveness of programs to attain Long Island Sound nitrogen runoff targets. I have attached the complete NY report to burden you with more than you want to know. Region 1 already has the reports from the other states.

Ex. 5 - Deliberative Process

Forgive me if the plan is to address these and other questions elsewhere in the chapter or DMMP. I'm only reacting to what was in the attachment. Without addressing these somewhere, the listing of projects/programs seems of limited service.

Mark

Subject: Working Draft of Sediment reduction chapter of LIS Dredged Material Management Plan

Hi,

Region 1 has been compiling information from NY and CT on existing programs and effort to reduce sediment inputs into LIS for the purpose of including this information into the LIS DMMP. They have forwarded to us a working draft of the LIS DMMP Sediment Reduction Chapter and asked that we take a quick look at it to ensure that all programs/efforts have been captured.

Is it possible for you or your staff to take a quick look at this and let me know if there are any omissions or inaccuracies?

Thanks.

Hi all,

I have attached two documents in preparation for this meeting: a couple of slides with a description of the sediment reduction chapter and a working draft of the chapter. The draft chapter currently only contains background for each item and information from CT and NY, but I am working on filling in information for the rest of the watershed where applicable. Thanks!
